EXPERIENCE

Java Full-Stack Developer Intern — EduSkills (Remote)

June 2026 – Present

- Build Java-based full-stack modules for simulated business scenarios within a structured training program, applying the **full software development lifecycle** from design through deployment.
- Collaborate with peer developers using **Git version control** and code reviews, following modular, maintainable coding standards emphasized throughout the program.
- Debug functional issues and refine backend logic under mentor guidance, building practical proficiency in **Java** and systematic problem-solving.

PROJECTS

ExamVault — Secure Question Paper Management System | [Demo](#) | [GitHub](#)

Apr. 2026 – May 2026

- Designed and built a centralized academic resource platform (HTML5, CSS3, JavaScript ES6, Fetch API) to replace scattered file-sharing, organizing **200+ question papers** into a searchable, categorized library.
- Implemented client-side search and dynamic DOM rendering to solve slow manual lookup, cutting average resource discovery time by **70%**.
- Built a responsive, cross-device UI with Flexbox/Grid and media queries, then deployed and version-controlled the project via **Git** and Netlify — my first end-to-end build-to-deploy cycle.

WorkPulse — Intelligent Employee Operations Platform | [Demo](#) | [GitHub](#)

May 2026 – July 2026

- Designed a modular employee-operations dashboard in JavaScript (ES6), structuring the codebase into reusable components to keep it **maintainable** as features grew.
- Built event-driven UI modules with client-side **data validation** to catch malformed entries, improving data integrity for administrators managing a growing employee-records dataset.
- Integrated JSON-based storage with automated EmailJS notifications, then debugged and refined performance and usability across multiple **Git-tracked releases**.

MomentumForge — Smart Productivity & DSA Progress Tracker | [Demo](#) | [GitHub](#)

July 2026 – Present

- Architected a full-stack productivity system in **vanilla JavaScript**, designing a shared state layer that keeps daily, weekly, and monthly views synchronized in real time to solve my own consistency problem while preparing for technical interviews.
- Implemented **Firebase Authentication** with Google Sign-In and a Local Storage persistence layer with backup and restore, choosing this architecture to keep the app secure and fully usable offline without a backend server.
- Built bar and donut chart components from scratch instead of relying on an external library, then tested the responsive light/dark-mode UI with **PDF export** across desktop, tablet, and mobile to confirm cross-device reliability.

SKILLS

- Programming Languages:** Java, JavaScript (ES6), HTML5, CSS3
- Frameworks & Libraries:** Node.js, Express.js
- Web Technologies:** DOM Manipulation, Fetch API, REST APIs, Responsive Web Design, Event Handling
- Databases:** MongoDB, MySQL
- Developer Tools & Platforms:** Git, GitHub, Visual Studio Code, Netlify, Firebase
- Core Concepts:** Data Structures & Algorithms (DSA), Object-Oriented Programming (OOP), Software Engineering, Full-Stack Development, Problem Solving, Debugging, Cross-Browser Compatibility, Modular Code Organization

EDUCATION

Dnyanshree Institute of Engineering and Technology, Satara

Oct. 2024 – Oct. 2028

Bachelor of Technology (B.Tech) in Computer Science & Engineering

- CGPA:** 7.28 / 10
- Relevant Coursework:** Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks, Software Engineering, Java Programming

ACHIEVEMENTS

- Ranked **11th globally** among **3,500+** contributors in Elite Coders Summer of Code 2026 (top 1%).
- Ranked **113th of 37,985** participants in LeetCode Weekly Contest 507 (top 1%).
- Achieved a **1700+** peak contest rating on LeetCode, reflecting strong DSA and algorithmic problem-solving skills.
- Selected as an Open-Source Contributor for GirlScript Summer of Code 2026, an international program.
